

PRESS RELEASE

ENAV signs contract for the modernization of radar surveillance systems at six Italian Air Force bases

Rome, 1 December 2025 — ENAV, the Italian Air Navigation Service Provider, signed a contract with TELEDIFE – the Information Technology, Telematics and Advanced Technologies Directorate of the Ministry of Defence – for the modernization, by 2032, of radar surveillance systems at six operational Italian Air Force bases: Grosseto, Trapani, Gioia del Colle, Istrana, Amendola and Galatina.

The project will be carried out by a Consortium led by ENAV, acting as lead contractor, Techno Sky (a 100% ENAV Group company) and Leonardo.

The contract has a total value of approximately 102 million euros including options and foresees the renewal of radar sensors for air traffic control and the implementation of an advanced maintenance service under a Service Level Agreement (SLA).

ENAV Group's share under the contract amounts to 43.2 million euros.

This strategic program completes the modernization plan for the Air Force's air traffic radar systems, for which the same consortium had already been engaged in 2024 for the Sigonella operational base, currently under development.

The contract represents a challenge for the consortium, which will modernize the radar network over a timeframe spanning from 2026 to 2032, also involving the Decimomannu and Sigonella bases for the maintenance component.

The adoption of the SLA confirms the Ministry of Defence's intention to strengthen its synergy with Techno Sky in long-term maintenance initiatives.

ENAV CEO Pasqualino Monti stated: *"The signing of this contract marks an important step in strengthening the national radar infrastructure and demonstrates the trust of the Italian Air Force and the Ministry of Defence in ENAV and its expertise. Modernizing six strategic bases means making a tangible contribution to the safety and efficiency of Italian airspace and highlights the value that higher investments in the defence sector can generate for ENAV. This project enhances our know-how, consolidates institutional cooperation, and creates the conditions to extend an advanced maintenance model over time, while also providing higher visibility and solidity to the growth trajectory of the non-regulated business. We are proud to lead a consortium that brings together Italian industrial excellence and will deliver lasting benefits to the country as a whole."*
